Textile & Leather Bespoke products

Think about the future and discover our sustainability commitments.

Stop using leather and discover our alternatives .

- Recyclable coton
- Wood fiber pulp
- Coconut cream
- Tyvek

Coconut Cream

Production process

Coconut Cream is a newly developed bio-composite material.

The material refers directly to the creamy flesh of the coconut water that sustains the bacteria whilst they are producing the cellulose.

This cellulose is then in turn collected and refuned until it becomes the final material.

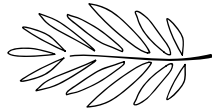

- Flexible
- Durable
- Waterproof
- Without harmful artificial chemicals
- 100% vegan

Wood Fiber Pulp

Production process

The wood fiber pulp is combined with other recycled cellulose, paper and natural fibers.

'It is a 100% vegan and bio-degradable material.

- Flexible
- Durable
- Resistant
- Bio-degradable
- 100% vegan

Tyvek

The perfect material

Tyvek is a highly recyclable material, without plastic and chemical products listed by european directives.

Light, resistant and waterproof, Tyvek can be used for several projects.

- Bags
- Envelopes
- Cardholder
- Lugage tags
- ...
